

OnBase to Epic Gallery in 60 Days

with FastLane

All-Domestic Quoris Staff • No Third Party Tools • Total PHI Containment • On-Scope, On-Budget

2 Months

Kickoff to bulk completion

32.5M

Total documents

800K

Documents extracted/day

Overview

Source DMS: Hyland OnBase

Deployment Type: Hosted

Target System: Epic Gallery

Scope: Extraction and Conversion

When a client shows up as a true partner, the work takes on a different energy. Due to the trust and collaboration the Evergreen team brought to the table, Quoris was able to hit our stride from day one.

Max Lyons, AVP of Data Services, Quoris

Evergreen Health

Provider Type: Hospital System

Size: 430 beds

Location: Washington, USA

Execution Summary

Document Volume

Evergreen estimated **52M** documents; Quoris identified **32.5M** to extract and convert for Gallery.

Document Types*

- HIM
- Revenue Cycle
- Clinical
- Patient Financials

Extraction Throughput

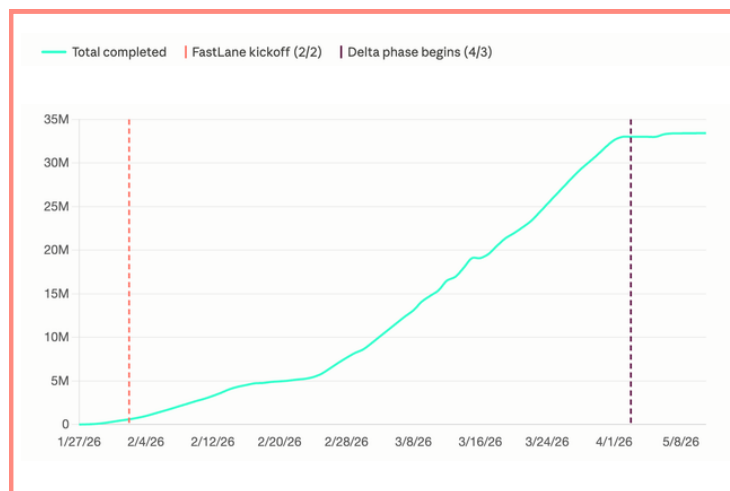

Evergreen initially performed this extraction in-house before seeking Quoris' help. With FastLane, Quoris extracted 32.5M documents in 60 days at an average rate of **800k docs/day**, with multiple days hitting **1M+ docs/day**.

Delivery Timeline

- 12 days from contract execution to FastLane kickoff
- Bulk extract completion 58 days ahead of promised delivery (2 month duration)
- Evergreen executes successful go-live on Epic Gallery for end users in parallel to FastLane project
- Current state:
Delta phase, extracting and converting approx. 5k docs/week

“When we brought Quoris in, we weren't handing off the problem, we were building a team. The results reflect what happens when both sides are fully committed to the same finish line.

Bob Ferguson, MBA Director IT Operations, ERP, Revenue Cycle and Access Applications, Evergreen Health

*These are the document types Quoris extracted from legacy system and converted for Gallery. We cannot verify whether or not client will import all of these to Gallery.
